

COVID-SAFE RETAILING

Safety solutions from your trusted security partner

www.sekura-global.com/covid-safe

SEKURA[®]

Restart retail with the complete Covid-safe range from a trusted supplier

Whether you're looking to re-open or ramp up your operations, Sekura Global can help. Our complete range of Covid-safe solutions creates safer stores and distribution centres for your shoppers and staff, so you can get back to business.

We have solutions to protect personal safety, disinfect premises and manage social distancing and contact tracing, so you can meet your obligations, reassure your customers and maximise capacity.

SteryBot® (p.3)

Sterilise your retail spaces during closing hours with the autonomous robot that uses hospital-grade UVC light to kill 99.99% of bacteria and viruses, including SARS-CoV-2.

Dynamic social distancing system (p.4)

Maximise capacity and minimise disruption with ultra-wideband tags that help staff maintain social distancing and support contact tracing.

PPE & Covid Essentials (p.4)

Protect your staff and customers with face masks, gloves, hand sanitiser, hygiene stations, acrylic screens and other essential products.

Why Sekura Global?

We've been the retail industry's reliable solutions provider for over 40 years, with a proven track record of turning innovative technology into solutions that save our customers time and money. We're trusted by some of the world's most successful retailers and have offices all over the world including the UK, Germany, USA, Canada and Australia.

SteryBot®

Helping retailers get back to business.

Proper disinfection of stores has become critical to retailers. Traditional, manual disinfection methods are simply too unreliable and present potential infection risk to staff. That's why Sekura Global has introduced SteryBot®.

SteryBot® is an autonomous robot that uses hospital-grade UVC light to sterilise stores during closing hours. It kills 99.99% of bacteria and viruses, including coronaviruses, to create Covid-safe retail environments.

Features

- Concentrated UVC light sterilises retail spaces
- Kills 99.99% of all bacteria and viruses (including coronaviruses)
- Disinfects a 25m² area in 10 minutes
- Stainless steel housing with antimicrobial coating to stop germinal carryover
- Fully autonomous navigation and charging
- No system installation required
- Remote activation and programming via smartphone or tablet
- Unlike handheld UV light solutions, does not expose staff to harmful rays

Hospital-grade UVC technology

The use of UVC light has long been proven in medical environments that require the strictest standards of sterilisation. UVC light belongs to the short-wave light spectrum and concentrates a high amount of energy to destroy the biological structures of germs. SteryBot® combines this technology with autonomous robotics to deliver an essential safety solution for the retail sector.

Fully autonomous

SteryBot® has been developed by mobile service robot pioneers MetraLabs. It uses specially developed navigation software, sensors and 3D-image processing technology to compute the optimal path through your store to eliminate potential sources of infection.

SteryBot® offers both manual and automatic operating modes. In manual operation, the robot can be started and programmed via an app on a mobile device. Or, in automatic operation, SteryBot® completes its tasks completely unsupervised before returning to its charging station. In both operating modes, all activities of the SteryBot® can be tracked and reported.

Visible reassurance

SteryBot® helps retailers reassure customers that their stores are safe shopping environments. As the world adjusts to the 'new normal' post-Covid-19, retailers are also making changes to ensure their premises are safe for customers and staff. Having robust social distancing and sanitisation procedures in place are central to reassuring customers and getting the industry getting moving again.

We understand you need to show customers how your stores are being made Covid-safe. That's why each SteryBot® can be individually branded for promotional purposes – and so you can give some personality to the latest public-facing members of your team.

How to order

Dynamic social distancing system

Maximising safety while minimising disruption.

Getting the retail industry fully moving again means making customers feel safe in store, but also making staff feel safe at work. People are still adapting to the concept of social distancing, which is likely to be with us in some form or another for some time as potential infections flare up and wane.

To help retailers get Covid-safe, Sekura Global offers a next-generation tagging system that enables dynamic social distancing.

Our new system uses ultra-wideband technology to help staff maintain required gaps in the workplace, giving employees personal alerts when they are too close to a colleague. The system is completely flexible and can be set to alert staff at different distances as guidelines change and are removed or reintroduced.

For staff, this brings workplace reassurance. For retailers, this means meeting their social distancing responsibilities while maximising possible staff capacity.

The tagging system also supports contact tracing so, in the event of an infection, business disruption is minimised because any necessary quarantines can be highly targeted.

How to order

Contact us today if you would like to find out more about our dynamic social distancing system, arrange a demonstration or place an order: www.sekura-global.com/contact.

PPE & Covid Essentials

Protection for staff and shoppers.

Retail environments will look very different in the short term, with temporary infrastructure and resources in place to enable staff and customers to minimise their risk of infection.

Protect your staff and customers with our readily-available range of safety & PPE essentials.

PPE

- 3-ply face masks
- Nitrile gloves

Cleaning products

- Hand sanitiser
- Alcohol gel
- Anti-bacterial wipes

Safety infrastructure

- Protective screens
- Hygiene stations

Traffic management

- Digital counters
- Hazard tape
- Floor labels
